### WHAT I DO

---

Backend Software Engineer with 6+ years of experience. I build and scale production backend systems and LLM-integrated products, and I built and operated banking microservices serving 2M+ requests/day. With AI-augmented engineering, I delivered a production SFTP platform in 10 days against a 17-day plan. My experience spans healthcare, F&B, and fintech. Open to full-time roles, international remote opportunities, and consulting engagements.

### PROVEN OUTCOMES

---

- Scale — Spring Boot microservices served 2M+ requests/day at sub-200ms; the 12 microservices I ran handled 500k+ daily transactions in banking
- Reliability — corporate reporting pipelines I tuned consistently met 48-hour reporting SLAs; a healthcare platform sustained 99.5% uptime across 100+ APIs
- Speed — a production SFTP platform delivered in 10 days against a 17-day plan, using AI-augmented engineering
- Efficiency — report generation accelerated 700% via query tuning and materialized views; Redis caching cut DB queries by 60% during peak restaurant load (F&B)
- Reach — notification system delivering 50k+ emails and SMS messages daily
- AI — LLM-integrated products end to end: RAG systems, AI chatbots, internal automation; Top 50, Meta Llama Hackathon 2025 (Hacktiv8 Indonesia)

### SERVICES

---

**Backend APIs** : REST APIs and microservices — Spring Boot, Django REST Framework, Node.js, Flask

**AI / LLM** : RAG, AI chatbots, workflow automation — OpenAI, Llama, Groq, LangChain, ChromaDB

**Databases** : Query tuning, indexing, caching, and data-model design — reports accelerated 700%

**Microservices** : 12 services delivered in production banking; Kafka event processing; Docker and Kubernetes

**Cloud & CI/CD** : Dockerized services on Azure and AWS; GitHub Actions CI/CD to Amazon ECR; secret scanning and migration-drift checks

**Consulting** : Architecture and technology selection grounded in hands-on delivery

### PROOF YOU CAN CHECK

---

- High-Precision Contract Advisor RAG — Top 50, Meta Llama Hackathon 2025; EasyOCR at 88%+ accuracy with PASAL/AYAT/BAB structure preserved — [github.com/fadhlillah2/llama-docs-auditor](https://github.com/fadhlillah2/llama-docs-auditor)
- Distributed Go rate limiter — fixed-window, sliding-window, and token-bucket algorithms; Redis Lua — [github.com/fadhlillah2/rate-limiter-project-go](https://github.com/fadhlillah2/rate-limiter-project-go)
- Portfolio, full CV, and LinkedIn — [fadhlillah2.github.io/Bio](https://fadhlillah2.github.io/Bio)

### HOW I WORK

---

- Start with a short WhatsApp chat or introductory call — [wa.me/6285157043131](https://wa.me/6285157043131)
- Scope, timeline, and code ownership agreed in writing before any work starts
- Deliver against agreed milestones with regular check-ins and transparent updates
- Complete handover on delivery: source code, documentation, and deployment details
