WHAT I DO

Backend Software Engineer with 6+ years of experience. I build and scale production backend systems and LLM-integrated products, and I currently operate banking microservices serving 2M+ requests/day. With AI-augmented engineering, I delivered a production SFTP platform in 10 days against a 17-day plan. My experience spans healthcare, F&B, and fintech. Open to full-time roles, international remote opportunities, and consulting engagements.

PROVEN OUTCOMES

- Scale — Spring Boot microservices serve 2M+ requests/day at sub-200ms; 12 microservices I run handle 500k+ daily transactions in banking
- Reliability — financial systems I support process \$10M+ daily volume while consistently meeting 48-hour reporting SLAs; a healthcare platform sustained 99.5% uptime across 100+ APIs
- Speed — a production SFTP platform delivered in 10 days against a 17-day plan, using AI-augmented engineering
- Efficiency — report generation accelerated 700% via query tuning and materialized views; Redis caching cut DB queries by 60% during peak restaurant load (F&B)
- Reach — notification system delivering 50k+ emails and SMS messages daily
- AI — LLM-integrated products end to end: RAG systems, AI chatbots, internal automation; Top 50, Meta Llama Hackathon 2025 (Hacktiv8 Indonesia)

SERVICES

Backend APIs : REST APIs and microservices — Spring Boot, Django REST Framework, Node.js, Flask

AI / LLM : RAG, AI chatbots, workflow automation — OpenAI, Llama, Groq, LangChain, ChromaDB

Databases : Query tuning, indexing, caching, and data-model design — reports accelerated 700%

Microservices : 12 services in production banking; Kafka event processing; Docker and Kubernetes

Cloud & CI/CD : Dockerized services on Azure and AWS; GitHub Actions CI/CD to Amazon ECR; secret scanning and migration-drift checks

Consulting : Architecture and technology selection grounded in hands-on delivery

PROOF YOU CAN CHECK

- High-Precision Contract Advisor RAG — Top 50, Meta Llama Hackathon 2025; EasyOCR at 88%+ accuracy with PASAL/AYAT/BAB structure preserved — github.com/fadhlillah2/llama-docs-auditor
- Distributed Go rate limiter — fixed-window, sliding-window, and token-bucket algorithms; Redis Lua — github.com/fadhlillah2/rate-limiter-project-go
- Portfolio, full CV, and LinkedIn — fadhlillah2.github.io/Bio

HOW I WORK

- Start with a short WhatsApp chat or introductory call — wa.me/6285157043131
- Scope, timeline, and code ownership agreed in writing before any work starts
- Deliver against agreed milestones with regular check-ins and transparent updates
- Complete handover on delivery: source code, documentation, and deployment details
